

Evinova Study Designer - Cost

Design smarter studies. See the cost impact instantly.
Optimize with confidence.

Evinova's Cost module brings instant cost transparency into study design, combining your historic actuals with benchmarks providing visibility into how your study's cost estimate compares to both similar studies from your company and similar studies across the industry. Teams compare estimates generated in outsourced, insourced, and hybrid models, explore scenarios in the Schedule of Activities, and optimize total cost while preserving scientific intent.

Top benefits

Accelerate decisions

From minimal inputs to a credible ballpark comparing to both your company's and the industry's past similar studies in seconds and then expand to bottom-up category views without leaving the design flow

Spend where it matters

Reveal cost drivers at visit, patient, country, site and category level - then optimize patient and site allocations while adhering to company strategic limits (minimums needed for specific countries, or thresholds to automatically drop tail countries, for example)

Confidence through evidence

Benchmark against your own history and industry peers with controls and validations to reduce the risk of mis-interpreting outputs

Connection to Design

Cost is estimated right off the source the Clinical Development team used to design the study. Enabling collaboration, reducing data discrepancies, and accelerating the planning process

What is included

- ✓ Similar studies estimator with Machine Learning backstops for sparse inputs
- ✓ Detailed breakdown across all cost categories
- ✓ Inline SoA metrics cost/visit and cost/patient
- ✓ Benchmark Explorer for internal & external comparisons
- ✓ Scenario & option compare within a cost dashboard
- ✓ Outsourced/insourced/hybrid model toggles and summaries

Evidence-backed results

Material savings identified & delivered

\$350M

in cost savings were delivered over three years by programs using Evinova.

~\$200M

in savings opportunities were identified within four weeks in large-pharma settings.
